

The colour adjusts from blue to violet to pink showing the change in the relative humidity inside the packaged item.

Our standard Humidity Windows indicate Relative Humidity at 40% - 80%. Other levels are available on request.

Reversible indicators reflect both an increase and decrease in RH values.

**Step 1:**  
Cut hole in packaging material.

**Step 2:**  
Position Window housing in cut out

**Step 3:**  
Fit sealing gasket on outside of packaging

**Step 4:**  
Secure Humidity Window by tightly screwing bezel

### APPLICATIONS:

Visual representation of packaging's internal relative humidity

Cost effective indication of internal packaging conditions. Use in conjunction with high barrier films and desiccants for long term humidity control.

### USAGE:

Use with correctly sealed high barrier films, foils and desiccants to reflect the internal Relative Humidity of your packaging. Reliably know when to replace or refresh desiccants.

### PACKAGING AND STORAGE:

Store in a cool dry place. Keep in the original Australian Inhibitor supplied packaging until ready for use.
